

OduDoc for Hospitals — Corporate Demo Playbook

Audience: Hospital CEO/COO, Clinic chain owner, CMO, IT Head, Diagnostic-chain admin

Duration: 30 minutes (can compress to 15 if needed) **Live URL:** <https://www.odudoc.com/corporate>

1. The pitch in one sentence

> "Replace 6 disconnected tools — EMR, billing, pharmacy, lab, OPD/IPD, telemedicine — with **one modular platform** that your hospital can roll out department-by-department, on your cloud or ours."

2. Who we're talking to

Role	Their question	How you answer
CEO / Owner	"What's the ROI?"	Consolidates 6 vendor bills → one. Typical 30–40% software + admin-cost reduction.
CMO / Medical Director	"Will doctors actually use it?"	Voice-to-note AI, one-click OPD workflow. Show the consult flow.
IT Head	"How does it integrate & is it secure?"	HL7/FHIR, CSV exports, audit logs on every record, TLS 1.3 + AES-256, HIPAA/GDPR/DPDP track.
CFO / Finance	"What's the real cost?"	Transparent per-module pricing. Clinic \$149/mo, Hospital \$749/mo, Enterprise custom. No per-seat surprise fees.
Ops / Admin	"Migration pain?"	14-day sandbox seeded with your departments. Side-by-side rollout per module.

3. The 30-minute demo flow

Minute 0–3 — Open on the corporate page

- Navigate to <https://www.odudoc.com/corporate>
- Hero headline lands: *"An intuitive healthcare solution — ERP + EMR + AI"*
- Point to the **12-module constellation** orbiting the OduDoc core on the right
- Say: *"Most hospitals we meet run 4–6 disconnected systems. Patient data lives in one, billing in another, pharmacy in a third. We unify them — and you turn modules on only when you need them."*

Minute 3–6 — The 4 differentiators (one slide worth, scroll the page)

■ Modular, not monolithic	Buy only what you need. Turn others on later — no re-platforming.
■■ Compliance-ready	Audit logs on every record. Role-based access. HIPAA/GDPR/DPDP aligned.
■ Modern stack	Next.js + Postgres on Vercel. Browser-native — no local installs.
■ No lock-in	Your data, exportable anytime. HL7/FHIR + CSV exports built-in.

Minute 6–18 — The 12 modules (live demo — skip to what they care about)

Ask them first: *"Which module solves your most painful problem today?"* Then deep-dive 3–4, not all 12.

Open a second tab at <https://www.odudoc.com/admin> (admin login) and demo these:

Module	Admin URL	What to show
Patient Management (EMR)	/admin/patients	Patient timeline, allergies, vitals, visit history
IPD / OPD	/admin/admissions , /admin/bed-census , /admin/encounters	Bed map, admission → discharge summary
Medical Staff	/admin/staff , /admin/roster , /admin/credentialing	Shifts, license expiry alerts
Quick Consultations	/admin/queue , /admin/appointments	OPD token flow
AI & Voice Consult	/admin/voice , /admin/telemedicine	Realtime speech-to-note → auto-draft prescription
Lab	/admin/lab-orders , /admin/lab-tests , /admin/pathology	Order → sample → signed PDF report
Pharmacy	/admin/pharmacy-inventory , /admin/prescriptions , /admin/dispensing	Batch + expiry tracking
Billing & Accounting	/admin/billing , /admin/invoices , /admin/ar-receipts , /admin/gl	Invoice, insurance claim, GST ledger
Inventory	/admin/inventory , /admin/vendors , /admin/orders	Reorder points, PO workflow
Surgery / OT	/admin/surgeries , /admin/pac	OT calendar, consumables log
Radiology / DICOM	/admin/radiology	Report sign-off, PACS hook
Telemedicine	/admin/telemedicine , /admin/consultations	Video consult + e-prescription

Bonus — the KPI wow factor: Open </admin/kpi-dashboard> at the end — hospital-wide metrics in one screen (bed occupancy, AR days, top diagnoses, doctor productivity).

Minute 18–22 — Patient-side demo (2 minutes)

Show the patient gets a great experience too:

1. Open <https://www.odudoc.com> in another tab
1. Click **Find Doctors** → pick a doctor → **Book Appointment**
1. Show the **phone-OTP flow** (no patient account needed)
1. Confirmation in 30 seconds
1. Switch to **Video Consult** button — same flow, lands in a Daily.co room

Say: "Your brand, your doctors, your pricing — but your patients get an Uber-smooth booking experience. We've seen no-show rates drop 25–40%."

Minute 22–26 — Pricing & plans

Open the pricing table on [/corporate](#):

Tier	Price	Best for
Clinic	\$149 / month	Single-location clinic, up to 10 staff. OPD + Patient EMR + Pharmacy + Billing + Telemedicine.
Hospital (most popular)	\$749 / month	Multi-department up to 100 beds. Adds IPD + OT + Inventory + Lab + AI Voice + Priority support.
Enterprise	Custom	100+ beds, multi-branch, diagnostic chains. Adds DICOM + HL7/FHIR + Dedicated infra + SLA + On-site training.

Close lines:

- "We start with a 14-day free trial — no card required."
- "If you sign a 12-month deal we seed your sandbox with your real org chart, departments, and doctors so you can start testing on day 1."

Minute 26–30 — Security, compliance, next step

Scroll to the dark security band on [/corporate](#) — point to the 6 pillars:

Audit logs	Every read + write
Encryption	TLS 1.3 + AES-256 at rest
Backups	Hourly PITR (Point-In-Time Restore)
Roles	10+ clinical presets
Exports	HL7 / FHIR / CSV
Hosting	EU / US / IN regions

Close: scroll to the **Request a demo** form → collect their details → tell them:

- "Pricing quote within 48 hours"
- "Sandbox account created the same day"
- "Our onboarding team schedules a follow-up with your CMO and IT lead"

4. Handling common objections

Objection	Response
"We already have a HMS."	"Great — most of our customers did. We migrate you one module at a time. You don't rip anything out until you're happy with the replacement. The lab or pharmacy module is usually the easiest first step."
"Is it cloud-only? Our hospital prefers on-premise."	"We offer managed cloud by default (EU/US/IN regions) but for Enterprise we can deploy in your own AWS/Azure/GCP account with a signed BAA."
"What about data export if we leave?"	"Your data is yours. One-click export to HL7, FHIR, or CSV — anytime, not just at cancellation. We'll show you the export button right now."
"Does it work in Hindi/regional language?"	"The interface supports multiple languages. Prescriptions, reports, and patient-facing SMS/email templates are localizable per branch."
"How long to go live?"	"Clinic tier: 3 days. Hospital tier: 2–3 weeks with module-by-module rollout. Enterprise: 4–6 weeks including data migration and training."
"Who supports us after go-live?"	"Email support on Clinic. Priority phone support + Slack channel on Hospital. Dedicated CSM on Enterprise."
"What if you shut down?"	"Postgres + Next.js — an open standard stack. HL7/FHIR exports. We've built it so you can self-host the whole thing if we ever stopped operating."

5. What happens after they say "yes"

The admin-side journey

1. **Lead lands** at [/admin/enterprise-leads](#) — sales team sees it immediately
1. **Empanelment** at [/admin/corporate-empanelment](#) — hospital onboarded as a corporate customer
1. **Sandbox created** — dedicated subdomain seeded with their org chart
1. **Kickoff call** scheduled within 48 hours
1. **Module rollout** — typically OPD + Pharmacy first, then IPD + Lab, then Billing + AI

Documents we'll send

- Master Services Agreement (MSA) + SOW
- Business Associate Agreement (BAA) for HIPAA customers
- Data Processing Addendum (DPA) for GDPR/DPDP
- Security questionnaire (SOC2-aligned)
- Reference calls with 2–3 similar customers

6. Demo cheat-sheet card (print this, keep in front of you)

URLs:

- Corporate landing → <https://www.odudoc.com/corporate>
- Live admin → <https://www.odudoc.com/admin>
- Patient booking → <https://www.odudoc.com> (Find Doctors → any doctor → Book Appointment)
- KPI dashboard → <https://www.odudoc.com/admin/kpi-dashboard>

Magic lines:

- *"We replace 6 tools with 1 — but you turn modules on when you're ready."*
- *"Your data, your export, anytime — no lock-in."*
- *"14-day free trial, no card."*
- *"Pricing quote in 48 hours."*

3 numbers to remember:

- **12** — modules in the platform
- **14** — day free trial
- **48** — hour turnaround on pricing quote

If asked about compliance:

- HIPAA-aligned (US)
- GDPR-aligned (EU)
- DPDP-aligned (India)
- Audit logs on every read/write

7. Common corporate demo scenarios (pick one)

Scenario A — Small clinic chain (2–5 locations)

Focus on: Patient EMR, Telemedicine, Pharmacy, Billing Tier: **Clinic** (\$149/mo × branches) Wow moment: One patient record that follows them across branches.

Scenario B — Standalone 50-bed hospital

Focus on: IPD + OPD + OT + Lab + Pharmacy + Billing Tier: **Hospital** (\$749/mo) Wow moment: Bed census map + AI voice consult drafting a prescription in 90 seconds.

Scenario C — Diagnostic lab chain

Focus on: Lab Management + Radiology + HL7/FHIR export Tier: **Enterprise** (custom) Wow moment: Order → sample → signed PDF → auto-SMS to patient in under 2 minutes.

Scenario D — Multi-specialty 200-bed hospital

Focus on: Everything + DICOM + on-prem deployment + dedicated CSM Tier: **Enterprise** (custom)
Wow moment: KPI dashboard showing cross-department productivity.

8. Post-demo email template

Subject: OduDoc for <Hospital Name> – next steps

Hi <Name>,

Thanks for your time today. As promised:

- 14-day sandbox: <sandbox URL – seeded with your departments>
- Login: <email> / <temp password>
- Pricing quote: attached (valid 30 days)
- Migration plan: 3-phase rollout, draft attached

Next step: 30-min call with your IT lead to review the integration plan. I've proposed 3 slots in the attached calendar invite.

Questions in the meantime – reply to this email or WhatsApp me on <number>.

– <Your name>

OduDoc for Hospitals

Print this as a PDF and keep a copy open during every corporate demo.
