

OduDoc — Website Guide & Demo Book

Live URL: <https://www.odudoc.com> **Last updated:** April 22, 2026

1. What OduDoc does (60-second pitch)

OduDoc is a patient-facing telemedicine + hospital-ops platform.

- **Patients** can browse doctors, book appointments, and start video consults — no account needed, just phone OTP.
- **Doctors** get a dashboard for appointments, consultations, prescriptions, and earnings.
- **Hospitals/Clinics** get a full admin panel for patients, staff, billing, inventory, labs, wards, OT, and more.

The homepage is the marketing entry — the real product lives in [/dashboard](#), [/admin](#), and the booking flow.

2. Accounts & logins (for the demo)

Role	Login URL	Notes
Patient	—	No account needed. Phone OTP only when booking.
Doctor	/auth/signin	Email + temp password from welcome SMS/email (7-day expiry)
Admin	/auth/signin	Admin credentials set in env / seeded user
Google SSO	/auth/signin	"Continue with Google" on sign-in page

Demo-ready doctor accounts are created by the admin via [/admin/doctors](#) → [Add Doctor](#) — welcome email + SMS with temp password is sent automatically.

3. The patient booking demo — most important flow

This is the flow to show first. It's what every visitor will use.

Steps

1. Go to <https://www.odudoc.com>
1. Click **Find Doctors** in the top nav (or scroll to the featured doctors)

1. Pick any doctor card → lands on [/doctors/\[id\]](/doctors/[id])
1. Click **Book Appointment** (or **Video Consult** — same flow)
1. **Step 1 — Slot:** pick a date (15-day window) and a time slot
1. **Step 2 — Details:** enter First Name, Last Name, Phone (with country code, e.g. [+91 98765 43210](#))
1. Click **Send verification code**
1. **Step 3 — OTP:** enter the 6-digit SMS code → click **Verify & confirm booking**
1. Booking confirmation screen with reference ID

What's happening under the hood

- OTP is handled by **Firestore Phone Auth** (free up to 10k SMS/month)
- Paid bookings redirect to Stripe for card payment
- **Payments are currently disabled for 24 hours** — bookings are free, no card required. Green banner on the form tells the patient.
- Video consultations open a Daily.co room tied to the consult token

4. Video consult demo (patient side)

Same as booking, but the button is **Video Consult**. After OTP:

- Paid: Stripe → then auto-redirects to [/dashboard/consultations/\[id\]](/dashboard/consultations/[id])
- Free: directly redirects to the consult page
- Patient fills in medical history → room unlocks when doctor joins

5. Doctor dashboard demo

Login at </auth/signin> with doctor email + temp password.

On first login with a temp password, the user is prompted to set a permanent password (7-day expiry enforced server-side).

Key pages to show

Page	What's there
/dashboard/doctor	Overview — today's appointments, upcoming consults, earnings snapshot
/dashboard/consultations	Active + past consults with patient history
/dashboard/prescriptions	Issue e-prescriptions
/dashboard/payments	Doctor earnings + payout requests
/dashboard/doctor/profile	Edit specialty, fee, slots, bio

6. Admin panel demo

Login at </auth/signin> with an admin account → </admin>.

The admin panel has **100+ modules** grouped by function. For a 5-minute demo, show these in order:

A. Doctor management (2 min)

1. </admin/doctors> — table of all doctors
1. Click **Add Doctor** → fill name/email/phone → Save
1. Doctor gets email + SMS with login + temp password automatically
1. </admin/applications> — doctor job applications; approve → same auto-onboard flow
1. </admin/careers> — job postings visible at </careers>

B. Letters generator (1 min)

1. </admin/letters> → **Generate Letter**
1. Pick type: **Appointment Letter** or **Experience Letter**
1. Choose doctor from dropdown → fill type-specific fields (role, start date, etc.)
1. Click **Generate** → PDF-printable view opens
1. Click **Print** in top-right for A4 letterhead output

C. Appointments & consultations (1 min)

- </admin/appointments> — all bookings across the system
- </admin/consultations> (inside telemedicine or doctor sections) — active video consults
- </admin/patients> — patient records + medical history

D. Clinical modules (show 2-3 from the list)

Pick any — the admin panel covers: pharmacy, lab orders, radiology, wards, ICU, OT, dialysis, maternity, oncology, ophthalmology, ENT, blood bank, dietary, housekeeping, biowaste, emergency codes, incidents, quality metrics, KPI dashboard, etc.

E. Finance & ops

- [/admin/billing](#) / [/admin/invoices](#) — patient invoicing
- [/admin/payouts](#) — doctor payout processing
- [/admin/inventory](#) / [/admin/vendors](#) — hospital supplies
- [/admin/staff](#) / [/admin/staff-schedule](#) — workforce

7. Patient-facing content pages

URL	Purpose
/	Homepage
/doctors	Browse all doctors
/doctors-az	A–Z index
/directory	Full directory
/specialty/[slug]	Specialty pages (cardiology, dermatology, etc.)
/conditions / /symptoms / /surgeries	Medical content hub
/blog	Health articles
/shop	Pharmacy / products
/tests	Lab test booking
/pricing	Plans
/for-clinics / /for-doctors / /corporate	B2B landing pages
/careers	Jobs + application form
/faq / /help / /contact	Support
/about / /privacy / /terms	Legal

8. Quick demo script (5 minutes total)

Minute 1 — Homepage & brand

- Open <https://www.odudoc.com> → scroll → highlight "Find Doctors" + "Video Consult" primary CTAs

Minute 2 — Patient books

- Find Doctors → click any doctor → Book Appointment → pick slot → fill form → SMS OTP → confirm booking

Minute 3 — Video consult

- Back to doctor profile → Video Consult → same OTP flow → show the medical-history intake

Minute 4 — Doctor side

- Log in as doctor → Dashboard → show today's appointments & consults

Minute 5 — Admin

- Log in as admin → `/admin/doctors` → Add Doctor (fake entry) → show welcome email/SMS → `/admin/letters` → generate + print a letter → `/admin/kpi-dashboard` for wow-factor metrics

9. Config & environment

Current platform state

- **Host:** Vercel (production = `www.odudoc.com`)
- **Database:** Postgres (via `bindPersistentArray` store pattern)
- **Auth:** NextAuth credentials + Google OAuth
- **SMS OTP:** Firebase Phone Auth (Blaze plan, free under 10k/mo)
- **Email:** Resend
- **SMS (non-OTP, e.g. welcome messages):** Twilio
- **Payments:** Stripe (currently disabled via `PAYMENTS_DISABLED_UNTIL` flag)
- **Video:** Daily.co

Critical env vars (set in Vercel)

- Firebase: `NEXT_PUBLIC_FIREBASE_*` (4 client) + `FIREBASE_ADMIN_*` (3 server)
- Stripe: `STRIPE_SECRET_KEY`, `NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY`
- Twilio: `TWILIO_ACCOUNT_SID`, `TWILIO_AUTH_TOKEN`, `TWILIO_VERIFY_SERVICE_SID`
- Resend: `RESEND_API_KEY`
- NextAuth: `NEXTAUTH_SECRET`, `GOOGLE_CLIENT_ID`, `GOOGLE_CLIENT_SECRET`
- Daily: `DAILY_API_KEY`
- Payments gate: `PAYMENTS_DISABLED_UNTIL` (ISO timestamp)

10. Known good + known issues

Working

- ■ Patient booking end-to-end (Firebase OTP → free booking or Stripe)
- ■ Video consult (Daily room, patient history form, doctor joins)
- ■ Doctor onboarding (manual add / application approve / career hire → welcome email + SMS + temp password)
- ■ Admin letters (appointment + experience, printable A4)
- ■ Temp-password 7-day expiry enforcement

Currently disabled / pending

- ■ **Stripe payments** — disabled for 24 hours (free bookings only) via env flag. Re-enable by removing/expiring `PAYMENTS_DISABLED_UNTIL`.
- ■ **Firebase Phone Auth** requires **Blaze plan** (free under 10k/mo SMS) — project is on Blaze. If plan is downgraded, OTP breaks.
- **Twilio free trial** only sends to verified numbers — upgrade Twilio account for open SMS to any number (Firebase handles OTP fine regardless).

11. Troubleshooting cheat sheet

Symptom	Fix
"Could not send code" on OTP step	Check Firebase Blaze plan active; check authorized domains include <code>www.odudoc.com</code> ; hard-refresh browser
reCAPTCHA enterprise warning in console	Harmless — falls back to v2 automatically
Doctor can't log in	Temp password expired (>7 days). Admin: <code>/admin/doctors</code> → resend invite
Booking fails on payment step	Check Stripe keys in Vercel; check <code>PAYMENTS_DISABLED_UNTIL</code> if you're trying to test paid path
Welcome email/SMS not sent	Check Resend + Twilio env vars; view server logs in Vercel
404 on freshly-generated letter	Cold-Lambda race on the JSON store — already fixed (awaits save + reload fallback). Retry once.

12. Files to know (for devs)

- `components/BookingModal.tsx` — the 5-step book-appointment modal
- `components/ConsultGateModal.tsx` — the video-consult OTP gate
- `lib/firebase-client.ts` / `lib/firebase-admin.ts` — Firebase SDK wrappers
- `lib/consult-otp.ts` — shared token store (verified + pending)
- `app/api/consult/firebase/verify/route.ts` — server-side Firebase ID-token verifier
- `lib/doctor-invite.ts` — doctor onboarding email + SMS
- `lib/users-store.ts` — users + temp password logic
- `lib/doctor-letters.ts` — letter records store
- `app/admin/letters/page.tsx` + `[id]/page.tsx` — letter generator UI

That's the whole book. For deeper dives on any module, open the corresponding folder under `app/admin/`.
